

# Content of Hard Drive(99)

## How do I "ghost" backup my JB-99 Hard Drive?

**NOTE: DO NOT BOOT YOUR HARD DRIVE THROUGH WINDOWS. (It will not be readable by your JB-99 afterwards)**

In order to successfully make a backup HD using Norton Ghost (we have tested Norton Ghost v6, v7, v2003), do the following:

- 1) Using options from Norton Ghost, create a bootable floppy disc using **MS DOS** and not PC DOS.
- 2) Connect JB99's HD and a blank HD to your PC.
- \*Make sure that you know which one is connected to Master or to Slave, and to Primary or to Secondary.
- 3) Using bootup disc, start your PC.
- 4) Ghost should start automatically.
- 5) Go to Options and check the option below.

```
span(Spanning) = N
autoname(AutoName) = N
crcignore(CRC Ignore) = N
fcr(Create CRC32) = N
f32(FAT32 Conversion) = N
f64(64K FAT Clusters) = N
fatlimit(FAT Limit) = N
fnw(Disable writing) = N
sure(Sure) = N
fro(Force Cloning) = Y
rb(Reboot) = N
fx(Exit to DOS) = N
defaultImg(Default) = N
ia(Image All) = N
ib(Image Boot) = N
id(Image Disk) = Y
defaultTape(Default) = Y
tapesafe(Tape Safe) = N
tapebuffered(Tape Buffered) = N
tapeunbuffered(Tape Unbuffered) = N
tapeject(Tape Eject) = N
ffx(UseExtINT13) = Y
fnx(DisableExtINT13) = N
ffi(DirectIDE) = Y
fni(DisableDirectIDE) = N
ffs(DirectASPI/SCSI) = N
fns(DisableDirectASPI/SCSI) = Y
```

- 6) Check the source and target HD to start the backup.
