E-Songbook

How to load a songlist into stand-alone E-Songbook

This instruction shows how to input manually a songlist into E-Songbook which is not connected wirelessly to a karaoke player.

In any PC, make a songlist using the following format.

The first field is the index number followed by the pipe "|" sign.
The pipe "|" sign is inserted by typing Shift-\.
The second field is the title followed by another pipe "|" sign.
The third field is the artist name followed by Enter for the next line.

EXAMPLE:

00001|AIN'T NOBODY'S BUSINESS|HANK WILLIAMS JR.
00002|COUNTRY CLUB|TRAVIS TRITT
00003|DANCY'S DREAM|RESTLESS HEART
00004|DRINKING CHAMPAGNE|GEORGE STRAIT
00005|DUMAS WALKER|KENTUCKY HEADHUNTERS, THE
00006|FOURTEEN MINUTES OLD|DOUG STONE
00007|GOOD TIMES|DAN SEALS
00008|HARD ROCK BOTTOM OF YOUR HEART|RANDY TRAVIS

Windows E-Songbook:
Save the file as "master playlist.txt", a text (txt) file. Be sure to select UTF-8 as the Encoding format.

Next connect the E-Songbook to the PC using a USB cable. The cable is most likely required to have a micro USB connector on one end for the E-Songbook and the regular USB connector on the other for the PC.You can also transfer the songlist using a micro SD card.

Next copy the "master playlist.txt" file from the PC into the following E-Songbook folder. This PC > Documents > 3D Customer Interface Client

After the file is copied, restart the E-Songbook software for the song list to appear.

Android E-Songbook:
Save the file as "cavsbook.txt", a text (txt) file. Be sure to select UTF-8 as the Encoding format.

Next copy the file onto a micro SD card. Insert the SD card into the E-Songbook.
Start the E-Songbook software
Go to Settting
Press Update songlist from SD.

Go back to the Song Book, and you will see the songlist appear.
