

# Super CD+G

## **Why do I get an error message "COULDN'T INSTALL SOUND CONTROL FILTER" when trying to play SuperCD+G disc using PlaySCDG program in my computer.**

This error can be due to a few things, such as operating systems, user rights, or interference from other software. To successfully play Super CD+G discs, install the new PlaySCDG program software that you can download from [http://cavsusa.com/scdg\\_pc.htm#Download\\_S](http://cavsusa.com/scdg_pc.htm#Download_S). Be sure to close the windows of the old version of PlaySCDG that comes up when you insert a Super CD+G disc into your disc drive and use the newly installed PlaySCDG to play the Super CD+G disc.

To download the new PlaySCDG program: [http://cavsusa.com/scdg\\_pc.htm#Download\\_S](http://cavsusa.com/scdg_pc.htm#Download_S)

\*For customers using Windows Vista or higher, please change the settings once the program is installed using the following tutorial: [How do I run my software on Windows Vista?](#)
