

USB/Hard drive(DVD)

What is the correct format and limitations for a juke.txt file, when used in a folder on an external USB drive?

1st column indicates the number and also the name of the pairing MCG and MP3 files.

2nd column indicates the title of the track 3rd column indicates the artist name

```
00001|TITLE|ARTIST
00002|TITLE|ARTIST
00003|TITLE|ARTIST
00004|TITLE|ARTIST
00005|TITLE|ARTIST
00006|TITLE|ARTIST
```

....

....

....

IMPORTANT FORMATTING NOTES AND LIMITATIONS:

- None of the columns should be empty. Enter a "dummy" value in case you don't know the information.
- Only use the English alphabet plus these characters ()-_.& --Any other character please try to avoid as they may cause our player to malfunction.
- Average FAT32 format filling system will limit you to about 20,000 songs(40,000 files) per folder.

IT SHOULD BE VERY RARE WHEN YOU NEED TO FORMAT THE JUKE.TXT, LET MCG MANAGER DO ALL THE WORK FOR YOU.
