

# USB/Hard drive(DVD)

**I am connecting my JB-99 harddrive to my PC using an IDE cable. I've never had problems in the past but now I get the following error: "System name not match". Can you help?**

First, your PC should be in DOS operating system, not Windows. Otherwise you will ruin the hard drive and it will not work with JB-99.

Second the JB-99 hard drive should be connected to your Secondary IDE cable, not the Primary. Also the hard drive coming from JB-99 player should have MASTER pin setting already, and it should be kept as such.
