

# USB/Hard drive(DVD)

**I was having trouble taking songs of of the cd g discs and putting them onto a memory stick for my 305g system. I found out I needed a plextor dvd drive. So I bought one. And all of my cd g's are now on my memory stick and all is well, except for 1 thing. I have 2 cdg's from TOPTunes Karaoke TT190 Joy Volume 5 and TT194 Joy Volume 6 that will not load up from the Plextor drive and be seen in the MCGManager. But, both discs will play in the 305G just fine. I have a Plextor PX-716UF that has read a dozen other cdg's just fine, but not these 2.**

Try reading these two discs using any other CD Recordable drive and MCG Manager.

The newest version of MCG Manager is designed to read CD+G discs from as many different CD Recordable drives (including DVD and CD Recordable drives) as possible. We have also found that Lite ON W6P22 can read and write CD+G discs and they are in stock. However for these two discs, it would be safer to test them first before purchasing.

Sorry but we do not carry Top Tunes discs.
