

# USB/Hard drive(DVD)

## How many songs would fit in my external hard drive?

This is a really rough estimate assuming that every songs is roughly 5 mb.

**Hard Drive Size(GB) = Song Capacity**

80	=	16000
100	=	20000
160	=	32000
250	=	50000
320	=	64000
400	=	80000
500	=	100000

Note: As you can see, even with the recommended 250GB hard drive you'll be able to fit about 50,000 songs more than needed by most KJ's.
