

PlayCDG KJ Deluxe

Can the player size be increase?

To change the size of the player the resolution can be adjusted. However before you make this change make sure that your computer and your monitor can support a resolution of 640X480.

To change the resolution right click on the program icon and go to properties. Under the compatibility tab select "run in 640X480 screen resolution" and apply the changes. The next time you run the player it will be displayed about 50% bigger.
